The Honorable Michael E. Busch
Speaker of the House of Delegates
H-101 State House
Annapolis, MD 21401-1991

**RE: HB 809/SB 677 (Ch. 200 and 199 of the Acts of 2008) – Nursing Facilities –
Accountability Measures – Pay-For-Performance**

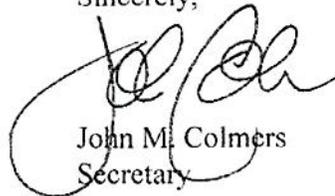

Dear President Miller and Speaker Busch:

In accordance with Section 1 of HB 809 and SB 677 – *Nursing Facilities – Accountability Measures – Pay-For-Performance*, the Department is required to develop a plan for the accountability measures to use in a pay-for-performance program, and submit this plan to the General Assembly. The Department's report is enclosed.

Some nursing home industry representatives have expressed concern about implementation timing, and the Department appreciates the concern about funding during a time that rate reductions are being imposed. Ultimately, this is a legislative matter. At this time, our focus is on meeting the requirements of the legislation and presenting a model that encourages and rewards quality care.

If you have questions or need more information about the information in this report, please contact Anne Hubbard, Director, Office of Governmental Affairs at (410) 767-6481.

Sincerely,

John M. Colmers
Secretary

Enclosure

HB 809/SB 677
Nursing Facilities—Accountability Measures—Pay for Performance

Introduction/Background/Charge

HB 809/SB 677 from the 2008 legislative session directs the Maryland Department of Health and Mental Hygiene (Department) to develop a plan for accountability measures to use in a pay-for-performance program to be implemented July 1, 2009. The plan developed by the Department, in consultation with representatives of Maryland nursing facilities and other stakeholders, must be submitted to the General Assembly no later than December 1, 2008. The plan should include program goals, recommended options, funding sources, implementation guidelines and benchmarking periods, and the administrative cost of implementing a pay-for-performance program.

SB 101 from the 2007 legislative session authorized the Department to initiate a quality assessment on certain nursing facilities in Maryland, in order to restore cuts to nursing facilities in the Maryland Medical Assistance Program (Medicaid). It was also established under SB 101 that up to 25 percent of the revenues generated by the quality assessment shall be distributed to nursing facilities based on accountability measures that indicate quality care or a commitment to quality of care.

Program Goals

The primary goal of Maryland Medicaid's Nursing Home Pay-for-Performance program (P4P) is to improve the quality of care for nursing home residents. Increasingly, health care payers and insurers are incorporating quality of care as one of the criteria used in reimbursement methodologies, thus, linking pay to performance.¹ As Medicaid is the largest payer for nursing facility care, a quality incentive program – or P4P initiative – has the potential to have a major impact on the quality of care for all nursing facility residents.²

To assure adequate consultation, a workgroup was formed for planning, discussion, and collaboration on the development of a P4P program.³ The Hilltop Institute at the University of Maryland, Baltimore County (Hilltop) provided technical assistance and collaboration in developing the methodology for a P4P program.

Review of other Pay-for-Performance Programs

With the help of industry representatives and stakeholders, the Department conducted a thorough assessment of other states' nursing facility pay-for-performance programs. But as nursing facility pay-for-performance programs are in their infancy, the Department found that

¹ Hazelwood, Anita, and Ellen D. Cook. "Improving Quality of Health Care Through Pay-For-Performance Programs." *The Health Care Manager* 27(2008):104-112.

² Kassner, Enid. "Medicaid and Long-Term Services and Supports for Older People." AARP Public Policy Institute. 27 September 2008 http://www.aarp.org/research/assistance/medicaid/fs18r_medicaid_06.html.

³ See Appendix A for a list of workgroup members

measurable outcomes are virtually non-existent and that reports of success rates are minimal and fairly inconclusive.⁴

Notably, however, the structure and methodology of most state pay-for-performance programs include fairly consistent measures of clinical performance. Examples include quality indicators collected by the Centers for Medicare and Medicaid Services (CMS), absence or presence of licensing and regulatory survey deficiencies, staffing measures (typically case-mix adjusted), quality of life measures obtained via resident or family satisfaction surveys, and other measurable components, such as use of contracted nursing staff, reductions in administrative costs, occupancy rates, and culture change.

Recommended Options

In collaboration with the workgroup, the Department developed a P4P model through which eligible providers will receive a composite score based upon multiple quality measures, in order to determine qualification for an incentive payment.

This section describes each recommended quality measure chosen for use in P4P and its weighted value. The measures recommended for P4P fulfill the legislative mandate that they be objective, measurable, and correlate to residents' quality of life and care.

- Maryland Health Care Commission Family Satisfaction Survey (40%)
- Staffing Levels and Staff Stability in Nursing Facilities (40%)
- MDS Quality Indicators (16%)
- Employment of Infection Control Professional (2%)
- Staff Immunizations (2%)

1. Maryland Health Care Commission Family Satisfaction Survey

Quality of life is a crucial component in any program linking pay to performance. In order to measure this component, the *Maryland Nursing Facility Family Survey* conducted by the Maryland Health Care Commission will be utilized in P4P. This survey is distributed annually to families and representatives of Maryland nursing facility residents. The Maryland Health Care Commission reports that 224 nursing homes participated in the 2007 survey. Of 17,113 responsible parties that received the survey, 9,575 respondents returned a survey (a 56% response rate).

The workgroup decided to collect the following scores from the survey:

- Overall Experience
 - Would you recommend this nursing home?
 - How would you rate the care in this nursing home?

⁴ Doran, Tim. "Lessons from Early Experience with Pay for Performance." Disease Management and Health Outcomes 16(2008):69-77.

- Five Domains which are comprised of multiple questions
 - Staff and Administration of the Nursing Home
 - Physical Aspects of the Nursing Home
 - Autonomy and Resident Rights
 - Care Provided to Residents
 - Food and Meals

This component will comprise 40 percent of the total overall score, 20 percent of which will be derived from the five domain scores and 20 percent from questions related to overall experience.

2. Staffing Levels and Staff Stability in Nursing Facilities

The positive relationship between nurse staffing levels and the quality of nursing home care has been demonstrated widely.⁵ In order to evaluate and compare staffing, the Department will utilize the annual Nursing Facility Wage Survey. Facilities report all nursing staff hours during a designated pay period. Comparison of staff hours and facility census enables the program to determine average hours of care per resident per day, both on an aggregate and on a facility-specific basis. Using a 4.13 hours standard for a facility with average resident acuity, the Program has set an acuity-adjusted goal for each provider based upon its resident mix.⁶ Providers are, therefore, scored on their actual staffing relative to their facility-specific goal.

In addition to the level of nursing staff in facilities, continuity and stability of nursing staff and the care they provide is vitally important for nursing home residents. The wage survey has been revised by adding a field to capture each staff person's length of employment at the facility. This information will enable the Department to assess staff stability/turnover rates.

Schnelle, J.F., Simmons, S.F., Harrington, M.C., Garcia, E., & Bates-Jensen, B.M. "Relationship of nursing home staffing to quality of care." *Health Services Research* 39(2004): 224-255.

Unruh, L., & Wan, T. "A systems framework for evaluating nursing care quality in nursing homes." *Journal of Medical Systems* 28(2004): 195-213.

⁶ This benchmark is based upon a study by the Centers for Medicare & Medicaid Services (CMS), an agency of the U.S. Department of Health and Human Services. Results of the study indicate a strong correlation between staffing levels and quality of care.

Stability will be measured by examining the percent of hours provided by nursing staff who have been employed by the facility 2 years or longer.

Staff levels (20%) and staff stability (20%) will comprise 40 percent of the overall score.⁷

3. Minimum Data Set (MDS) Clinical Quality Indicators

In November 2002, CMS began a national Nursing Home Quality Initiative (NHQI). The nursing home clinical quality indicators, as a component of NHQI, come from federally-mandated resident assessment data that nursing homes collect on residents during their stay. The intent of these measures is to provide consumers with a supplementary source of information demonstrating a nursing facility's performance in several areas of clinical importance.

The workgroup decided on the following quality indicators for long-stay residents from the resident assessment data or "Minimum Data Set" (MDS) for use in P4P:

- Percent of High-Risk Residents Who Have Pressure Sores
- Percent of Residents Who Were Physically Restrained
- Percent of Residents Who Have/Had a Catheter Inserted and Left in Their Bladder
- Percent of Residents with a Urinary Tract Infection
- Percent of Long-Stay Residents Given Influenza Vaccination During the Flu Season
- Percent of Long-Stay Residents Who Were Assessed and Given Pneumococcal Vaccination

Some workgroup members indicated a preference to include all of the long and short stay measures. Among other things, several of these measures were not considered reliable and were not included.⁸

This component accounts for 16 percent of the overall score.

4. Employment of Infection Control Professional

In accordance with state licensing regulations (COMAR 10.07.02.21), all Maryland nursing facilities are required to employ a trained Infection Control Professional (ICP). State regulatory officials have indicated that compliance with this component is minimal. The Department will use a tiered point system as follows:

- Facilities not in compliance with State regulations will receive no points.
- Facilities meeting the minimum requirement will receive 1 point.
- Facilities will receive 2 points if:

⁷ The data used to analyze and compile staffing levels and stability includes: FY 2007 Cost Reports, 2005 Work Measurement Study, October 2007 Wage Survey, and 10/1/2006-9/30/2007 MMIS LOCs. The intent is to use the most recent available reports. These data were used in developing the model; FY10 payments will use later data

⁸ Abt Associates, Inc. Quality Monitoring for Medicare Global Payment Demonstrations: Nursing Home Quality-Based Purchasing Demonstration. 2006.

- in a 200+ bed facility, an ICP is dedicated full time to infection control responsibilities, or
- in a facility with fewer than 200 beds, an ICP is dedicated to infection control responsibilities at least 50 percent of the time.

This component will comprise 2 percent of the total score.

5. Staff Immunizations

In addition to the ICP component, the Department will measure the percentage of nursing facility staff (all staff classifications) that have been vaccinated against influenza.

The benchmark for staff vaccinations will be 80 percent, which is based on an epidemiological threshold necessary to achieve herd-immunity. Nursing facilities reaching the benchmark of 80 percent will receive the full 2 points. Facilities under 80 percent will not receive points for this component.

The staff vaccination component will comprise 2 percent of the total score.

Issues/Options Discussed

Through an iterative process within the workgroup, other components for measuring quality were discussed for use in P4P. Staff training and continuing education, culture change, and the use of the “My InnerView” survey instrument were discussed as components to potentially measure.

The workgroup decided not to collect data in order to measure staff training and continuing education of nursing facility staff because it would impose additional administrative burden on nursing facilities.

The movement known as “culture change,” which emphasizes a resident-centered culture in nursing facilities, was discussed as an important element of quality care in nursing facilities. However, no standardized tool has been developed to measure culture change. Thus, the workgroup agreed not to evaluate this component presently but recognizes the importance of the “culture change” movement and will consider using it in the future as part of P4P as valid and reliable tools become available.

“My InnerView” is a survey instrument that has been employed in various states for purposes of assessing quality of care in nursing facilities. Certain workgroup participants proposed supplanting the Maryland Health Care Commission’s Family Satisfaction Survey with the My InnerView survey in the future.

Facilities Not Eligible for Participation

Per SB 101, CCRCs and facilities with fewer than 45 beds are not subject to the quality assessment and consequently, are not eligible for participation in P4P. In addition to these exceptions, the workgroup agreed that nursing facilities with low Medicaid participation will not be eligible for participation in P4P, since any incentive payment based on too few Medicaid days would be insufficient to motivate improvement.⁹

Additionally, by utilizing the Office of Health Care Quality's (OHCQ) deficiency data, facilities that meet the following criteria would also be excluded from P4P:

1. Any facility currently identified by CMS as a "special focus" facility, which is defined as a facility that has:
 - a. more problems than other nursing homes (about twice the average number of deficiencies),
 - b. more serious problems than most other nursing homes (including harm or injury experienced by residents), and
 - c. a pattern of serious problems that has persisted over a long period of time (as measured over the three years before the date the nursing home was first put on the Special Focus Facility list).¹⁰
2. Any facility which in the previous 12 months has had a denial of payment for new admissions sanction imposed by OHCQ.
3. Any facility which in the previous 12 months has been identified by OHCQ as delivering substandard quality of care. This is defined as follows:
 - a. Substandard quality of care means one or more deficiencies related to participation requirements under 42 CFR 483.13, resident behavior and facility practices, 42 CFR 483.15, quality of life, or 42 CFR 483.25, quality of care, that constitutes either immediate jeopardy to resident health or safety, a pattern of or widespread actual harm that is not immediate jeopardy, or a widespread potential for more than minimal harm, but less than immediate jeopardy, with no actual harm (Defined in the CMS state operations manual chapter 7, section 7001).
 - b. Substandard quality of care includes any health deficiency (called F-tags) that is of a scope and severity of "F" or higher but not equal to "G" (as "G" represents isolated and not patterned harm).

⁹ Low Medicaid proportion is considered 1 standard deviation below the statewide average.

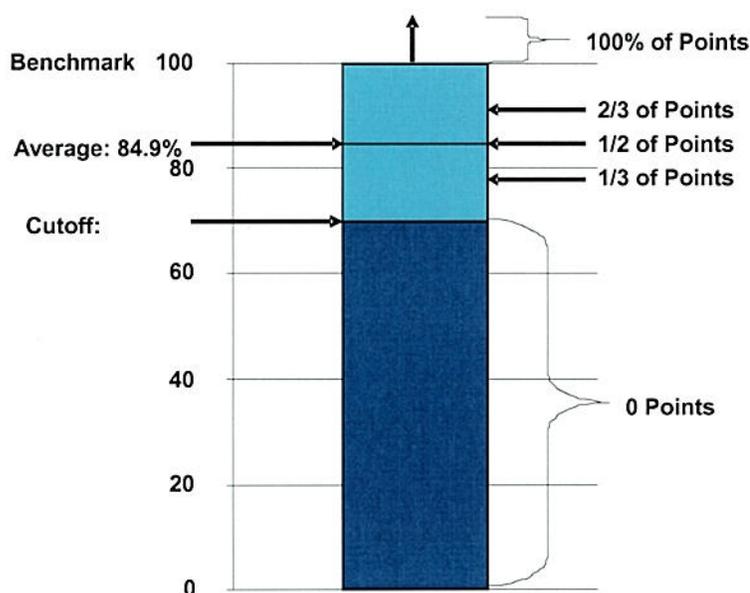

¹⁰ <http://www.cms.hhs.gov/certificationandcompliance/downloads/sfflist.pdf>

Scoring Methodology

Once it has been determined who is eligible for participation in P4P, each facility's raw scores, for each recommended component, are compiled and ranked according to the methodology set forth by the Department.

In order to compare measures and array scores, a methodology that adjusts for variation in point spread is essential. The methodology chosen for P4P provides a context and creates meaningful equivalency across scores by ranking them relative to one another.

Scores are arranged between the benchmark and cutoff scores. A score that meets or exceeds the benchmark score always gets 100 percent of points available for that component. The average score gets 50 percent of points available. The cutoff score is the average score minus the difference between the highest and average scores. A score at or below the cutoff score gets no points. Scores between the benchmark and cutoff scores get points proportionate to where the score falls within the range between the highest and cutoff scores. This methodology adjusts for variation in the ranges within measures where some produce scores in a tight range and some measures produce scores in a wider range. The figure below illustrates the methodology.

Two measures; staff levels and staff immunizations, are being scored against absolute benchmarks. These benchmarks represent the optimal or target performance. Staff levels are being measured against the benchmark of 4.13 nursing hours per resident day (acuity adjusted) and staff immunizations are being measured against the benchmark of at least 80 percent of staff having received the vaccination in order to receive points. For all other measures, the benchmark is set as the highest score recorded for the measure.

Once each measure is scored, a composite score for each nursing facility is created and the facilities are ranked accordingly.

Quality Incentive Payment

The composite score will indicate each facility's rank and subsequent amount of payment per Medicaid patient day. The current model shows the highest scoring facilities, representing 35 percent of the eligible days of care, receiving a quality incentive payment within a payment range of \$2.50-\$5.50 per Medicaid patient day.

Some workgroup members preferred to have a smaller per diem payment distributed to a greater number of facilities. However, rewarding "average" facilities is not consistent with the intent of the program. By limiting payment to the highest-scoring facilities, recognition of providers with a demonstrated commitment to quality of care is evident.

Most importantly, research on pay-for-performance programs among other health care providers has suggested that these programs may be unsuccessful if the amount of payment is not meaningful.

Payment for Improvement

Additionally, the workgroup came to the consensus that it is not only important to reward facilities for how they perform at one point in time, but also to recognize improvement. Thus, the workgroup proposes a performance payment beginning in FY 2011 based on improvement in a facility's overall score.

Funding Sources

In accordance with SB 101, up to 25 percent of the revenues generated by the nursing facility quality assessment shall be used as an incentive payment based on measures that indicate quality of care or a commitment to quality of care. In FY 2009, revenue from the quality assessment is projected to provide \$14.4 million General Funds (\$28.8 million total funds) to fund a rate increase. The funding for P4P will, essentially, be derived from a re-allocation of a portion of the rate increase funded by the quality assessment. By reducing the average facility reimbursement by one-half of 1 percent, approximately \$6.5 million (total funds) would have been available for P4P if implemented in FY 2009.

Implementation Timeline and Benchmarking Periods

Under the provisions of HB 809/SB 677, implementation of a pay-for-performance program was delayed from the original start-up date of July 1, 2008 until July 1, 2009. For illustrative purposes, the Department has calculated what provider scores and ranks would have been if the program had been implemented on July 1, 2008. More up-to-date data would be used if the program is implemented as legislatively mandated on July 1, 2009.¹¹

The Administrative Cost of Implementation of a Pay for Performance Program

The cost of administering the pay-for-performance program will be absorbed by existing resources.

¹¹ Data on staff immunization and utilization of Infection Control Professional are not available to be scored for FY 2009.

Appendix B: Scoring Methodology by Component

Staffing Levels

When the most recent work measurement study (WMS) was conducted in Maryland nursing facilities in 2005, the average nursing staffing was 3.27 hours per resident per day.¹² Providers with more light care residents than the average facility have lower average staffing per day; heavy care residents receive more staff time on average. The benchmark of 4.13 hours is 26 percent higher than the WMS study average. In order to establish an acuity-adjusted goal for each facility, the work measurement data, which is based on the facility's actual resident mix, is multiplied by 1.26 (see example below). Each facility's staffing from the most recent wage survey is compared with its acuity-adjusted goal. Providers that meet or exceed their goal will receive maximum points for this component.

Among the facilities that do not meet their goal, the median facility will receive 50 percent of the points for this component. Based upon the range of scores between the average and the cutoff, providers above or below the average will receive the proportionate number of points.

For example, a facility that meets the goal will receive 20 points. If the average facility's staffing is at 80 percent of goal, the average score would receive 10 points. Therefore, a facility staffing at 90 percent of its goal would receive 15 points and a facility staffing at 70 percent of its goal would receive 5 points. A facility staffing at 60% of its goal or less receives no points for this component.

Example

Goal Nurse-Hours/Resident Day:	4.13
Average WMS Calibration:	3.27
Goal divided by Average:	1.26

	WMS Calibration	Acuity-adjusted Goal	Actual	% of Goal	Points
Nursing Home "A"	3.11	X 1.26 = 3.93	4.40	112%	20.0
Nursing Home "B"	3.83	X 1.26 = 4.83	4.10	85%	8.3

Staff Stability

¹² Nursing staffing hours are comprised of all direct and indirect care time allocated to each resident by RNs, LPNs, nurse aides, certified medication aides, and the director of nursing.

Stability will be measured by examining the percent of hours provided by nursing staff who have been employed by the facility 2 years or longer. The facilities that report the highest percent of hours provided by nursing staff employed for 2 years or longer will receive the maximum points.

Among the facilities that are below the highest scoring facility, the average score will receive 50 percent of the points for this component. Based upon the range of scores between the cutoff and the highest score, providers above or below the average will receive the proportionate number of points.

MHCC Survey

Domain scores and overall satisfaction questions will be utilized in the methodology for P4P. A majority of the questions are to be answered in the format of: “always, usually, sometimes, never” with the option of “does not apply.” The point range is 4 points for “always,” 3 points for “usually,” 2 points for “sometimes,” and 1 point for “never.” Questions are presented in the positive, so that “always” is the best response. Related questions are grouped in order to obtain domain scores which are calculated by averaging the scores on the four-point scales. Therefore, for each domain, there will be a resulting score ranging from 1 to 4.

The overall satisfaction question asks respondents to rate the care at the nursing home using a scale from 1 to 10 where 10 is the best care possible and 1 is the worst care possible. The scores for the overall satisfaction questions are calculated by dividing the total scores for that item by the number of valid responses.

The last question on the survey (“Would you recommend this nursing home?”) is to be answered using “definitely yes, probably yes, probably no, definitely no.” This overall satisfaction question will be scored according to the percentage of respondents who answer “definitely yes” or “probably yes.”

The facilities that report the highest score in each domain and overall satisfaction questions will receive the maximum points for that component. Among the facilities that are below the highest scoring facility, the average score will receive 50 percent of the points for this component. Based upon the range of scores between the cutoff and the highest score, providers above or below the average will receive the proportionate number of points.

For some facilities, survey responses were too few for a valid score. Any facility not scored on an MHCC measure will be assigned the average score of the facilities that did score on that measure. Doing so results in not unduly penalizing facilities with missing scores.

MDS Outcomes

The quality measures from the MDS to be used in P4P shall be oriented positively so that the higher scores represent positive outcomes. As reported in P4P, the scores represent the questions as indicated below:

- Percent of High-Risk Residents Who DO NOT Have Pressure Sores
- Percent of Residents Who WERE NOT Physically Restrained
- Percent of Residents Who HAVE NOT Had a Catheter Inserted and Left in Their Bladder
- Percent of Residents Who DO NOT have a Urinary Tract Infection
- Percent of Long-Stay Residents Given Influenza Vaccination During the Flu Season
- Percent of Long-Stay Residents Who Were Assessed and Given Pneumococcal Vaccination

The facility (or facilities) that reports the highest percent on each MDS quality measure will receive the maximum number of points.

Among the facilities that are below the highest scoring facility, the average score will receive 50 percent of the points for this component. Based upon the range of scores between the cutoff and the highest score, providers above or below the average will receive the proportionate number of points.

For some facilities, certain MDS quality measures may be missing. Any facility with a missing MDS score will be assigned the average score of the facilities that did score on that measure. Doing so results in not unduly penalizing facilities with missing scores.

Employment of Infection Control Professional

In accordance with state regulations (COMAR 10.07.02.21), all Maryland nursing facilities are required to employ a trained Infection Control Professional (ICP). State regulatory officials have indicated that compliance with this component is minimal. The Department will use a tiered point system as follows:

- Facilities not in compliance with State regulations will receive no points.
- Facilities meeting the minimum requirement will receive 1 point.
- Facilities will receive 2 points if:
 - in a 200+ bed facility, an ICP is dedicated full time to infection control responsibilities, or
 - in a facility with fewer than 200 beds, an ICP is dedicated to infection control responsibilities at least 50 percent of the time.

Staff Immunizations

In addition to the ICP component, the Department will measure the percentage of nursing facility staff (all staff classifications) that have been vaccinated against influenza.

The benchmark for staff vaccinations will be 80 percent which is based on an epidemiological threshold necessary to achieve herd-immunity. Nursing facilities reaching the benchmark of 80 percent will receive the full 2 points. Facilities under 80 percent will not receive points for this component.
