

VACCINE STORAGE TEMPERATURE LOG

MONTH: _____ Days 1 - 15

REFRIGERATOR [Vaccine MUST be stored between 35°F and 46°F (2°C and 8°C) or lower to maintain potency]																														
<i>Staff Initials</i>																														
<i>Time</i>																														
Day of Month		1	2		3		4		5		6		7		8		9		10		11		12		13		14		15	
°F	°C	am	pm																											
≥ 49	≥ 9.4																													
48	8.9																													
47	8.3																													
46	7.8																													
45	7.2																													
44	6.7																													
43	6.1																													
42	5.6																													
41	5.0																													
40	4.4																													
39	3.9																													
38	3.3																													
37	2.8																													
36	2.2																													
35	1.7																													
34	1.1																													
33	.6																													
≤ 32	≤ 0																													

FREEZER [Varicella vaccine MUST be stored at 5°F (-15°C) or lower to maintain potency]																													
≥ 8	≥ -13.3																												
7	-13.9																												
6	-14.4																												
5	-15.0																												
4	-15.6																												
≤ 3	≤ -16.1																												

Instructions: Place an “X” in the box that corresponds with the temperature (rows), day of the month, and am or pm (columns) for your temperature check. Then enter your initials and the time you monitored the temperature in the boxes at the top of the chart.

If the temperature is in the gray range:

1. Store the vaccine under proper conditions as quickly as possible,
2. Call the vaccine manufacturers to determine whether the potency of the vaccines has been affected, and
3. Call the immunization program at your local health department for further assistance: (_____) _____
